

LAND REGISTRY AND CADASTRE INFORMATION THROUGH THE ANALYSIS OF BUSINESS INTELLIGENCE IN TURKEY

THE STRUCTURE OF GDLRC

General Directorate of Land Registry and Cadastre (GDLRC) is one of the most important contact points of the citizens with the state and consisting of 24 Regional Directorates, 972 Land Registry Directorates and 81 Cadastre Directorates. GDLRC serves a total over 30 millions people with a total of 19.655 employee with an annual transaction volume almost 8 millions.

Each year, more than 25% of the population of the country benefits from Land Registry and Cadastre services and 1 land registry transaction is being done per second.

TASKS

To fulfill the services of **land registry and cadastre** under the responsibility of treasury,

To ensure updating of **land registry (cadastre) plans**,

To provide the services of **geodetic infrastructure, aerial photography** and produce 1/5000 and larger scale cadastral and topographic maps,

To create **spatial data infrastructure**.

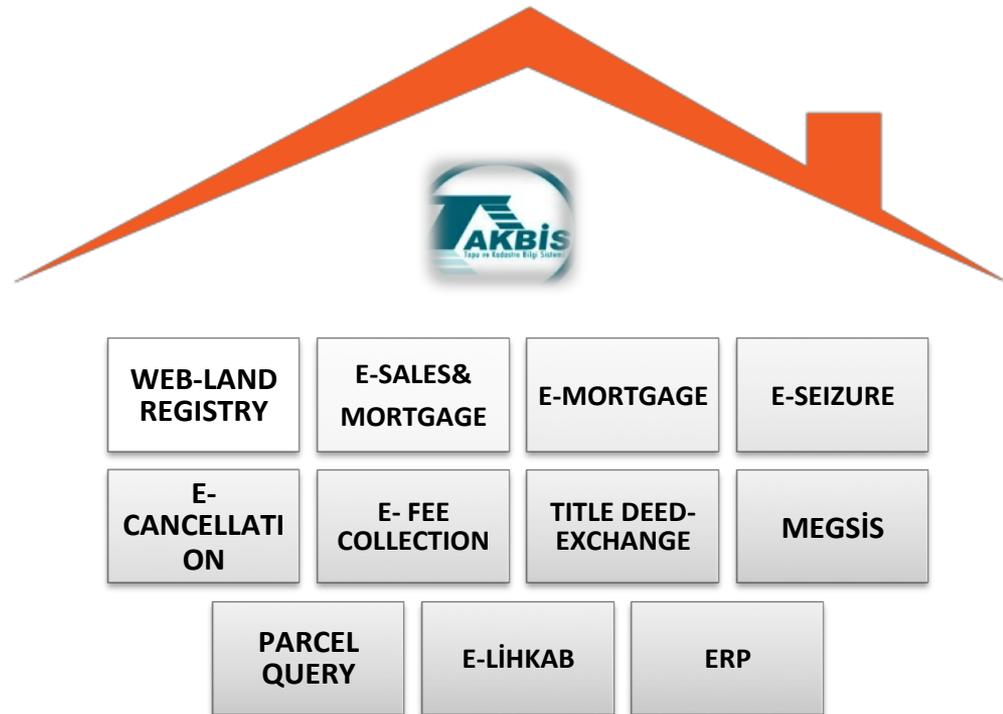

To carry out Land Registry and Cadastre transactions of **real and legal foreign persons and corporations with foreign capital**, to provide **statistics** and to share with related institutions.

To regulate **intermediation activities** for immovable property,

LAND REGISTRY AND CADASTRE INFORMATION SYSTEM (TAKBİS)

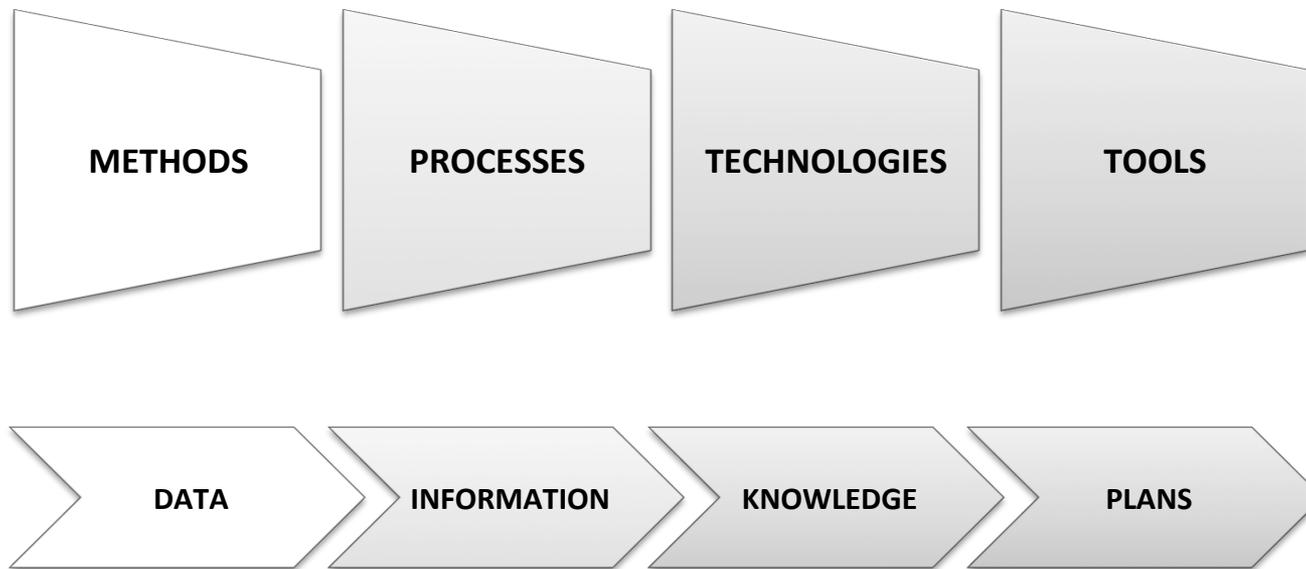

TAKBİS is one of the strategic e-government project that contains all real estate ownership data throughout the Country,

Real Estate transactions are conducted, monitored and shared through TAKBİS, and services provided to costumers are presented in a reliable, up-to-date and fast manner.

BUSINESS INTELLIGENCE

Business Intelligence is an umbrella term for a set of

And guides the organizations for its very betterment, traditionally known as **Decision Support System (DSS)**

EVOLUTION OF BI

-1980s

Executive Information Systems(EIS), Decision support Systems(DSS)

-1990s

Data Warehousing (DW), Business Intelligence (BI)

-2000s

Dashboards and scorecards, performance management

-2010+

Analytics, big data, mobile BI, in-memory cache, data science

THE STRUCTURE OF GDLRC BI SYSTEM

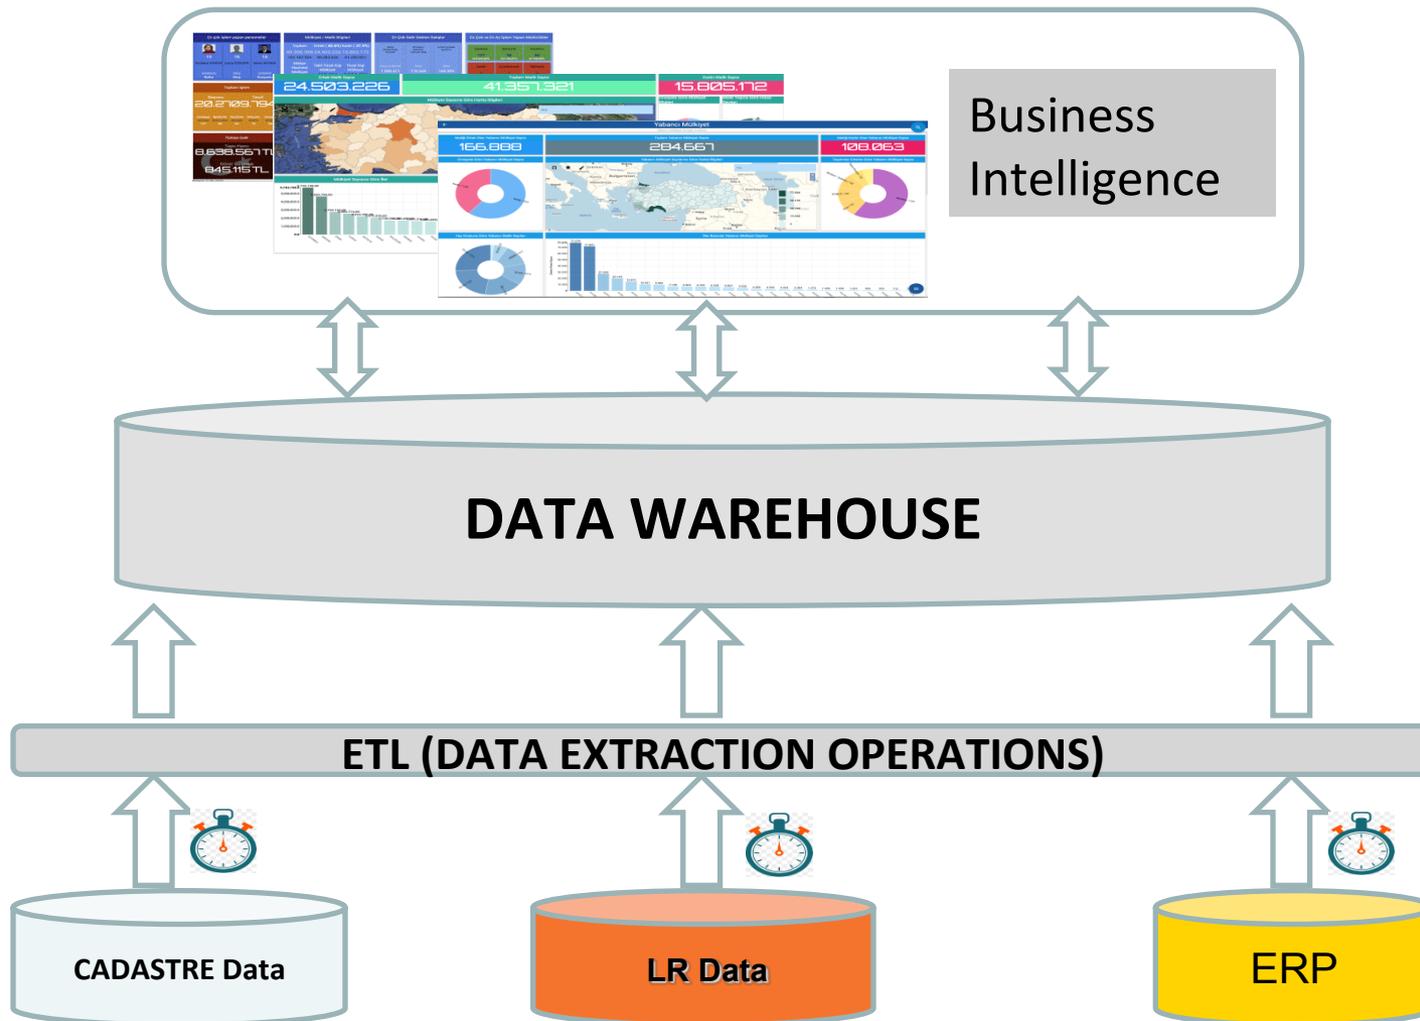

New and changing data from operational systems (TAKBIS and ERP) are periodically **transferred** to the data warehouse system.

Data that is **consolidated** in the data warehouse is associated with each other.

Subject-oriented Data Markets (Data Mart) is **updated with new data**

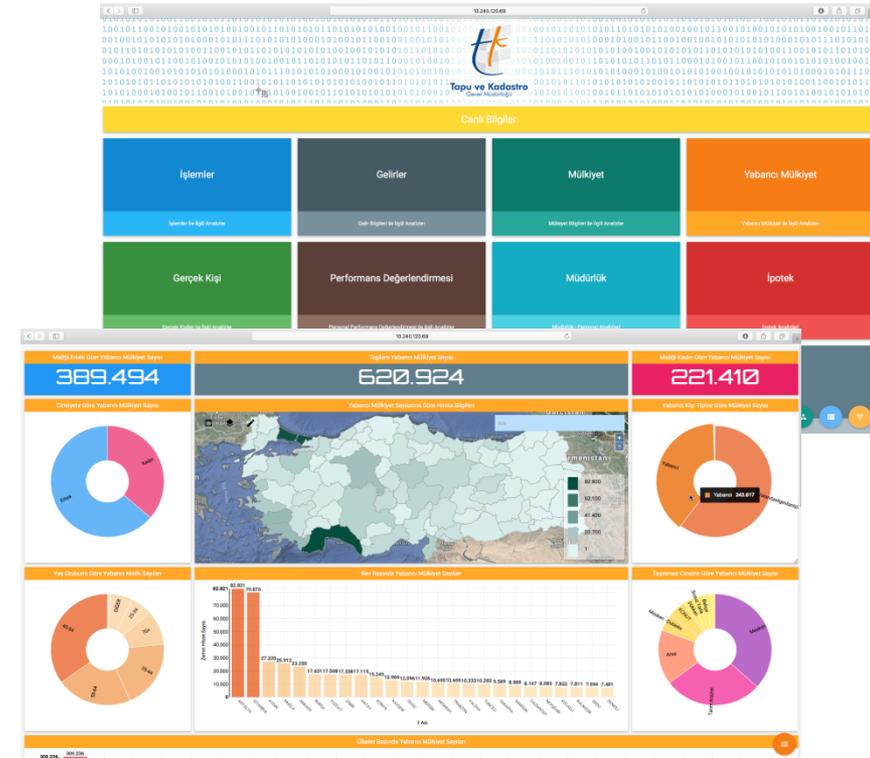

The consolidated and correlated data is **provided** to end users through the dashboards via Business Intelligence application, supported by Interactive and Map Analysis.

INFRASTRUCTURE OF GDLRC's BI SYSTEM

BUSINESS INTELLIGENCE DASHBOARD HEADLINES

- The unit, which make the most transactions
- The personnel, who make the most transactions
- Number of male / female owners
- The most costly(fee) transaction
- Daily Revolving Fund income
- Mortgaged Real Estate Distributions
- Real estate purchases of foreigners
- Increased buy/sell transactions in recent times
- Average sales price changes in the zone
-

BENEFITS

As a result of the digital age, data is growing steadily and quickly

Data sources are multiplying and relationships are growing

Multidimensional analysis of data is needed to ensure that strategic decisions are taken quickly and accurately

In case of need; access to information is expected to be fast, flexible and easy

Data Security =
Information Security =
Public Security Access to data needs to be as secure and traceable as it is fast

As new data sources are created, their analysis and reporting should be fast.
